Software Engineer | AI & Cloud Systems | U.S. Permanent Resident

SUMMARY

Software Engineer with experience in backend development, cloud systems, and AI-enabled enterprise workflows. Strong in REST API development, production debugging, cloud observability, and performance optimization. Currently learning Gemini Enterprise for Customer Experience (GECX) to deepen customer-experience AI delivery on Google Cloud.

EXPERIENCE

Application Consultant / Software Engineer

Feb 2026 - Present

Capgemini

- Delivered Dialogflow CX enhancements and production defect fixes for an enterprise CCaaS platform, tracing parameter lifecycles across 10+ pages and routes to reduce misrouting scenarios.
- Investigated routing across Dialogflow CX, webhooks, API/database calls, and cloud logs; contributed optimizations that reduced average call latency by about 3 seconds per call.
- Supported backend, observability, and release validation using Python, Cloud Run, Cloud Logging, BigQuery, Looker, Confluence, and 5+ Visio process maps.
- Translated technical findings into testing notes, process maps, and validation steps that helped cross-functional teams align on release readiness and customer-care workflow reliability.

Software Engineer

Sep 2024 - May 2025

H2 Techno World

- Designed and developed a full-stack inventory and order management platform using React.js, FastAPI, and PostgreSQL across 5 core business modules.
- Built RESTful backend services with normalized PostgreSQL schemas across 8 core entities and audit/validation workflows for 4 event categories.
- Automated Docker-based deployments through GitHub Actions and AWS EC2, reducing release execution from 7 manual tasks to a 3-stage workflow.

Full-Stack Developer Intern

Dec 2022 - May 2023

Crown Software

- Developed and enhanced 7 MDHostel modules covering leave requests, complaints, guest management, attendance, food services, room allocation, and meal workflows using PHP, JavaScript, Ajax, Bootstrap, jQuery, and REST APIs tested through Postman.
- Led SQL-focused backend work after 3 months by debugging and optimizing PHP-integrated database queries across student management workflows.

PROJECTS

Multi-Agent Conversational AI System

Jul 2025

Python | FastAPI | React.js | SQLite | SQLAlchemy | Cohere | FAISS

- Built a full-stack conversational AI platform supporting RAG Q&A, CSV ingestion, CRM user management, conversation memory, and document upload workflows.
- Implemented 7 RESTful API endpoints and a 6-stage RAG pipeline that retrieves history, searches FAISS indexes, constructs prompts, generates Cohere responses, and logs interactions through 2 SQLite-backed CRM entities.

User Management System

2025

Python | FastAPI | PostgreSQL | Docker | JWT | pytest

- Built a backend user-management API with JWT authentication, role-based access control for ADMIN, MANAGER, and authenticated users, and PostgreSQL persistence.
- Containerized the FastAPI service with Docker and added pytest validation to demonstrate testable API design, secure account workflows, and maintainable backend structure.

EDUCATION

M.S. Computer Science

- New Jersey Institute of Technology

Jan 2024 - May 2025

GPA: 3.9/4.0

B.E. Computer Engineering

- Charusat University

Jul 2019 - May 2023

GPA: 9.75/10 | Top 5% of Class

SKILLS & CERTIFICATIONS

Languages: Python, Java, JavaScript, TypeScript, SQL, C++, PHP

Frontend & Backend: React.js, Next.js, FastAPI, Spring Boot, Node.js, REST APIs, Microservices, SQLAlchemy

Databases: PostgreSQL, MySQL, MongoDB, SQLite, BigQuery

Cloud & DevOps: GCP (Dialogflow CX, GECX - learning, Cloud Run, Cloud Logging), AWS (EC2, S3, RDS, Lambda), Docker, GitHub Actions

AI & Data: RAG, FAISS, Cohere LLM, Data Validation, SQL Optimization, ETL/ELT Fundamentals

Tools: Git, GitHub, JIRA, Postman, pytest, Looker, Cursor, Visio, Confluence

Certifications: AWS Cloud Practitioner, AWS Developer - Associate, Google Associate Cloud Engineer
